

## Internet Security and Acceleration (ISA) Server Implementation Plan

**Needs:** A simple yet robust and powerful network proxy/firewall that allows for group and user based access control integrated into Active Directory.

**Step 1)** Insert the ISA install CD and follow the default options.

**Step 2)** After the software is installed, set it up as needed using one of the network templates. The default configuration is adequate.

**Step 3)** Create a firewall rule to ALLOW all traffic from the INTERNAL network to the EXTERNAL network otherwise no one will be able to get to the internet and the user's will scream until you do this.
