

Anti-Virus Implementation

[Symantec Corporate Edition v10.0]

To install the anti-virus server:

1. From the Symantec Antivirus CD, run Setup.exe.
2. In the Symantec Antivirus panel, click “Install Symantec Antivirus > Install Symantec Antivirus”.
3. Follow and complete the prompts until you are asked to enter a user name.
4. In the Create Server Group User panel, in the Username box, accept or change the user name that will be used to administer the existing server group, and then click “Next”.
5. Follow the prompts until installation completes.
6. When installation completes, restart the computer.

To install the Symantec System Center:

1. If you are accessing the files from the CD from a network resource or if Auto run is disabled on the computer, in the root folder of the CD, double-click Setup.exe.
2. In the Symantec Antivirus panel, click “Install Administrator Tools > Install Symantec System Center”.
3. In the Welcome panel, click “Next”.
4. In the License Agreement panel, click “I accept the terms in the license agreement”, and then click “Next”. If Microsoft Management Console 1.2 or later is not installed on the computer, a message indicates that you must allow it to install.
5. In the Select Components panel, check any of the following components that you want to install:
 - Alert Management System Console
 - Symantec AntiVirus Snap-In
 - Symantec Client Firewall Snap-In
 - AV Server Rollout Tool
 - ClientRemote Install Tool

5. Click **Next**.

6. In the Destination Folder panel, do one of the following:
 - To accept the default destination folder, click “Next”.
 - Click “Change”, locate and select a destination folder, click “OK”, and then click “Next”.
7. In the Ready to Install the Program panel, click “Install”.
8. In the InstallShield Wizard Completed panel, to close the wizard, click “Finish”.
9. When you are prompted to restart the computer, click “Yes”.

To install client software by using the Symantec System Center:

1. In the Symantec System Center console, in the left pane, right-click the server group that you created when you installed the antivirus server.
2. If necessary, click “Unlock Server Group”, and then unlock the server group.
3. In the left pane, click the primary management server so that it remains highlighted.
4. On the Tools menu, click “ClientRemote Install”.
5. In the Welcome panel, click “Next”.
6. In the Select Install Source Location panel, click “Default Location”, and then click “Next”.
7. In the Select Computers panel, under Antivirus Servers on the right side, select a computer to act as the parent server (your primary management server).
8. Under Available Computers on the left side, expand “Microsoft windows network”, expand a group, and then select a client computer.
9. Click “Add”.
10. Continue selecting and adding client computers until all of the clients that you want to manage are added, and then click “Finish”.
11. In the Status of Remote Client Installation(s) panel, when the remote installation is finished, click “Done”.
12. Restart the client computers.

13. After a few minutes, in the Symantec System Center console, on the main menu bar, click “Actions > Refresh”.

14. On the main menu bar, click “Console > Save”.
